

What's new

IBM® Digital Health Pass **Administration**

Welcome to this Digital Health Pass release. This document describes new features, key updates, enhancements, and defect fixes. For more information, contact your IBM® representative.

Version 2 (March 2022)

Verification rules

In Digital Health Pass administration, System Administrators can customize verification rules on behalf of a customer.

- For a given credential specification, administrators can enable or disable individual rules.
- Administrators can enable or disable an entire specification.
- Values used by specific rules cannot be modified in a given configuration.

Note that only System Administrators can customize verification rules in Version 2. For more information, see the Administrator's Guide.

Verifier metrics

System Administrators and Customer Administrators now have the ability to export metering reports. Reports can be exported in comma-separated value (CSV), PNG, or JPG format. Administrators can export either the entire report (that is, all charts within a given report), or a single chart from a report.

Improved charts

To improve readability, IBM uses bar chart as the standard format in Digital Health Pass administration.

Accessibility improvements

This Digital Health Pass administration release includes support for assistive (Section 508) technologies. The administrative user interface now supports screen readers, magnifiers, and high contrast mode.

Version 1 (September 2021)

Support for multiple digital healthcare credential standards

IBM Digital Health Pass supports emerging digital record standards that are used to identify vaccination status for individuals. These standards encourage interoperability among providers, while maintaining security and privacy. The Digital Health Pass Wallet and Digital Health Pass Verify mobile apps now support these credentials and their QR codes.

Supported healthcare credential types:

- IBM Digital Health Pass
- Digital COVID Certificate (European Union)
- SMART Health Cards (VCI™)
- Good Health Pass

For more information, see the Digital Health Pass Administration Guide. To access it in the administration console, click **Help** and then select **Administration Guide**.

Verifier metrics

System Administrators and Customer Administrators can review verification-related statistics for a selected Digital Health Pass customer or organization. Easy-to-understand donut charts summarize verifier activity by credential type, scan results, and issuer for a specified time range.

Usability improvements

IBM has made Digital Health Pass administration easier with various improvements to the administration console, including:

- **Administration home page:** Your starting point for easier administration. Available home page options vary based on the role, for example, System Administrator, Customer Administrator, or Organization Administrator.
- **Help and guidance on administration pages:** Refer to instructions on administration pages to help you complete tasks.
